

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
```

```
{
    int i= 1;
```

```
int s =1;
```

```
while(s <= n)
{
    i++;
    s += i;
}
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

For example:

Input	Result
9	12

Answer: (penalty regime: 0 %)

2/4

```
1 | #include<stdio.h>
2 | int main(){
3 |     int n;
4 |     int count=0;
5 |     count++;
6 |     int i=1;
7 |     count++;
8 |     int s=1;
9 |     count++;
10 |    scanf("%d",&n);
11 |    while(s<=n){
12 |        count++;
13 |        i++;
14 |        count++;
15 |        s+=i;
16 |        count++;
17 |    }
18 |    printf("%d",count);
19 | }
```

	Input	Expected	Got	
✓	9	12	12	✓
✓	4	9	9	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
