

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("*");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                printf("*");
                printf("*");
                break;
            }
        }
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
1  #include<stdio.h>
2  int main(){
3      int n;
4      int count =0;
5      count++;
6      scanf("%d",&n);
7      if(n==1){
8          count++;
9      }
10 }
11 else{
12     count++;
13     for(int i=1;i<=n;i++){
14         count++;
15         count++;
16         for(int j=1;j<=n;j++){
17             count++;
18             count++;
19             count++;
20             break;
21             count++;
22         }
23     }
24 }
25 printf("%d",count);
26 }
27 }
```

	Input	Expected	Got	
✓	2	12	12	✓
