

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
    int rev = 0, remainder;
    while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;
    }
    print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
1 #include<stdio.h>
2 int main(){
3     int n;
4     scanf("%d",&n);
5     int count = 0;
```

```
5   int count =0;
6   count++;
7   int rev=0,remainder;
8   count++;
9   while(n!=0){
10      count++;
11      remainder=n%10;
12      count++;
13      rev=rev*10+remainder;
14      count++;
15      n/=10;
16      count++;
17  }
18  count++;
19  printf("%d",count);
20 }
```
